

ISO 27000 Security Information Workshop

Scheduled Public and On-Site Courses Available

This is a case study based workshop. Participants work together to develop a detailed Security Information Plan. During this workshop you will gain in-depth knowledge and the necessary understanding about ISO 27000 best practices and how they can be applied to your organization.

This **two-day, certified IT Service Manager Instructor led workshop** aligns the family of ISO standards. The instructor delivers a detailed walk-through of the ISO 27000 standard and certification process. Attendees leave with the practical knowledge necessary to lead or contribute to their company's ISO 27000 certification and security information management programs. The class is taught by a Professional Level ISO certified instructor.
